Fable roadmap: Now / Next / Later

Young professionals aged 25-30 in NY, LA and Chicago | OKRs through end of Q3 2027

Now

This quarter | outcome bets

#4 Notifications

We bet timing sleep reminders to each person's routine will cut frustration-driven churn and improve reported sleep for current users.

KR2 KR1

#12 Content library

We bet putting high-quality non-sleep content one tap away will make self-care beyond sleep a weekly habit for current users.

KR3

#6 Personalized check-ins

We bet check-ins built on each person's own history will improve reported sleep for users who opt in.

Signal to watch: opt-in rate.

KR1

Next

Early 2027 | why it waits

#14 Load time under 2s

Once notifications are fixed, we'll see whether slow loading is the next driver of churn.

#9 Crisis mode (referral-based)

Fits "difficult periods," but needs clinical scoping before building.

#11 Apple Watch integration

Richer sleep data is only useful once #6 proves users will opt in.

Later

Bets, not commitments | revisit when

#1 Onboarding redesign

Our focus expands from current users to new-user growth.

#5 Premium therapist-matching

KR3 proves strong demand for support beyond sleep.

#13 Fable for Teams

Consumer retention in our core segment is stable.

#7 Spanish / Portuguese

We expand where-to-play beyond the three US cities.

#8 Web version

Usage data shows meaningful non-bedtime use.

Committed obligation (outside the roadmap): #10 Close the WCAG 2.1 accessibility gap flagged in the audit. Legal requirement with reserved capacity, not a strategic bet.

Off the roadmap: #2 daily streaks and #3 social layer. Both conflict with the aspiration and the privacy-first hard no.
